

## Tips for Using FogBlocker Dry Wipes

- FogBlocker Dry Wipes require moisture to pull the “FogBlocker” formula out of the cloth - this is simply done by breathing on the lens causing condensation from your breath, wetting the lens with water or lens cleaner and wiping the lens dry with the FogBlocker cloth. Remember to use the FogBlocker cloth on both sides of your lenses!
- Keep the cloth dry and stored in its pouch when not being used. Do not wash the FogBlocker cloth as it will wash out the FogBlocker formula.
- Do not share your cloth if you are using condensation from your breath to activate the FogBlocker. Consider a box of FogBlocker wet wipes if you wish to share.
- FogBlocker is a patented formula made from **all-natural plant-based cellulose** and does not harm eyes or lenses.

### Eyeglass Anti-Fog Cloth

Lingettes humides anti-buée pour lunettes

- 1** Clean and dry the lens.  
Nettoyez et séchez le verre.

- 2** Add some moisture to the lens with your breath or a few drops of water. Lens cleaner can also be used.  
Ajoutez un peu d'humidité au verre avec votre souffle ou quelques gouttes d'eau. Un nettoyant pour verres peut être utilisé.

- 3** Before the moisture disappears, gently wipe the lens with the anti-fog cloth.  
Avant que l'humidité ne disparaisse, essuyez doucement le verre avec le chiffon anti-buée.

- 4** Remember to coat both sides of each lens.  
N'oubliez pas de recouvrir les deux côtés de chaque verre.
