

Thomas FX Introduces Sno-FX

October 04, 2019 ASC Staff

The food-grade, biodegradable, artificial snow dissolves in the rain.

Thomas FX Group Inc. has released Sno-FX, a biodegradable, non-toxic, artificial snow developed specifically to the high grade demanded by motion-picture productions.

“This environmentally friendly, artificial snow product was engineered from scratch and looks and acts exactly like real snow,” says John Quee, CEO of Thomas FX Group. “Sno-FX is made from food-grade, biodegradable materials that, like real snow, dissolve in the rain. With the harmful effects of plastic in the environment known, we are committed to making an environmental impact where we can, and Sno-FX reduces the amount of harmful waste produced during film and television production.”

Sno-FX has appeared in such productions as *The Revenant*, *The Hateful Eight* and *Interstellar*.
